

Feature Efficiency (same dim budget) (112 datasets)

CD = 0.31

The figure is a horizontal line plot comparing the feature efficiency of two models, MSRF_full and CRF_700, across 112 datasets. The horizontal axis represents a performance metric, with three specific points marked as 1, 2, and 3. The vertical axis identifies the two models. MSRF_full is represented by a red square and CRF_700 by a black square. For MSRF_full, a horizontal line extends from the left edge to a point on the axis, with a vertical line connecting this point to the label '1'. For CRF_700, a horizontal line extends from the left edge to a point on the axis, with a vertical line connecting this point to the label '2'. A third point on the axis is labeled '3', and a horizontal line extends from the right edge to a point on the axis, with a vertical line connecting this point to the label 'CRF_only'. A scale bar at the top left indicates a difference of 0.31 (CD = 0.31). Below the axis, there are two horizontal bars: a dark blue one and a grey one.
